Cognitive Science at Work

RUR Attend Technology 2003 show at Dounreay.

R.U.Robots travelled up to Dounreay in Caithness to attend the Technology 2003 exhibition organised by Nu-Tech Associates.

RUR were exhibiting their own technology along with technology from several partner companies that could prove useful to UKAEA in planning and undertaking some of the decommissioning work on the Dounreay site.

Technologies on display included as-built plant capture, virtual reality visualisation and modelling, robotic simulation and robot manipulator design & build capability.

R.U.Robots' Managing Director, Geoff Pegman, commented: "We have been really pleased with the response from UKAEA staff to the possibilities for the technologies from ourselves and our partner companies. It seems clear that there is huge potential for small, high technology companies to contribute to the definition and optimisation of the remote handling systems and techniques that will be needed for the decommissioning of the Dounreay site. I have high hopes that the contacts we have made at this exhibition will lead to a significant involvement in the demanding tasks being undertaken by UKAEA staff."

As well as R.U.Robots' own technology, partner company technology on show at Dounreay included material from [Oxford Technologies](#), [Virtalis](#) and [Z&F \(UK\) Limited](#).
